

Naloxone is a safe, easy-use, life-saving medication that has one job: Reverse an opioid overdose by blocking the effects of opioids. Learn how to use naloxone, visit [sit.ly/naloxonetrainpa](http://sit.ly/naloxonetrainpa).

Acting Secretary signed an [standing order prescription](#) for naloxone. This means you do not need to get a prescription for naloxone from a healthcare provider. The following products are available:

## NON-PREFILLED SYRINGE WITH NALOXONE VIAL

Intra-muscular naloxone can also consist of a non-pre-filled syringe with a vial that contains liquid naloxone. The syringe is used to draw the liquid naloxone into the syringe before administration. Once filled with the correct amount of liquid naloxone, the syringe needle is inserted and administered into the muscle of the upper arm or thigh. Non-pre-filled needle-syringe naloxone products may be easier for people who have experience using a syringe to draw liquid medicine from a vial and administering medicine with a needle.

The Pennsylvania Standing Order for naloxone allows eligible persons to be provided with the following: 1) Naloxone 0.4mg/mL im single dose vials (quantity to dispense two single dose vials) 2) one 3 cc, 23g or 25g, 1½-inch or 1 ½-inch syringe per dose and 3) patient instructions

Please ask your pharmacist or healthcare provider for information and safety instructions for the non-pre-filled syringe naloxone products provided to you. The Department does not endorse a particular manufacturer for the supply of non-pre-filled syringes or vials.
